

## ADVANCED SKIN REGENERATION TECHNOLOGY

Featuring the patented SCA technology, Endocare delivers advanced regeneration and repair therapy for photoaged skin.

SCA is a natural secretion derived from the mollusc *Cryptomphalus aspersa* obtained through a carefully controlled pharmacological process. A natural source of complex proteic factors, SCA has been shown to have a strong regenerative effect on skin damaged by photoaging, radiation or dermatological treatments. SCA is formulated under the Endocare and Tensage brands and is ideal for use post-laser treatment and as part of a daily anti-aging regimen.

Specifically, SCA has been shown to stimulate the biochemical, structural and functional processes of the skin, including:

- Fibroblast proliferation
- Assembly of extracellular matrix
- Collagenase activity
- Antioxidant activity

The elegant Endocare and Tensage formulations are distinguished by a biorepair index, indicating their regenerative potency.

Available for full-face, body, eyes and lips, the SCA range of products combine cosmetic appeal and efficacy for noticeably younger, healthier skin.

Recommended by leading dermatologists, aesthetic doctors and plastic surgeons because of its **effectiveness, scientific support** and **innovative cosmetic textures**.

**RENEWED, NOURISHED MORE YOUTHFUL SKIN  
FROM THE VERY FIRST WEEKS OF APPLICATION.**

# ADVANCED SKIN REGENERATION PROGRAM

## PRODUCT

	<p>30ml</p> <p><b>gelcream</b></p> <p>Non-oily, rapidly absorbing cream that regenerates skin, increasing suppleness and smoothness.
